1903 W. Empire Avenue
Burbank, CA 91504

Dear Mr. Helgerson:

As a follow up to our discussions over the last few months, I am formally requesting the following information.

As you know, the U.S. Environmental Protection Agency and the Los Angeles Department of Water and Power are constructing a database containing hydrologic and chemical use data for the San Fernando Basin. The databases will be used to provide data for the Basinwide Remedial Investigation/Feasibility Study and the existing and proposed Operable Unit Feasibility Studies, and to guide further data collection efforts in the San Fernando Basin. To assist in the construction of the database, we would appreciate it if you could supply us with the magnetic data about your subsurface investigations. Data we are interested in include:

- * Well construction details, including total depth, elevation, screened intervals, well diameter, gravel pack interval, and drilling method;
- * Status of each well (accessible, abandoned, destroyed, etc.);
- * Water level data;
- * Results of soil sampling activities (Results should include date of sample collection, location of sample, chemicals analyzed, detection limits, and results of analyses).

The data can be provided in an ASCII file(s) on either magnetic tape or diskettes. The data can be sent in a common non-ASCII format (Lotus 1-2-3, dBase) if it is more convenient for you.

Please call me at (415) 974-9096 with questions or comments regarding this request. I would appreciate receiving this information as soon as possible. If you foresee any problems supplying this magnetic data to me, please call so we can discuss.

Sincerely,

Alisa Greene
